

User Profile Validation System Python Program Implementation:

```
name=input("enter your full name")
email=input("enter your email")
mobile=input("enter your mobile number")
age=int(input("enter your age"))

if (name.count(" ")>=1 and name[0]!=" " and name[len(name)-1]!=" " and
email[0]!='@' and email.count("@")==1 and email.count(".")==1 and
len(mobile)==10 and mobile.isdigit() and mobile[0]!=0 and
age>=18 and age<=60) :
print("User Profile is VALID")
else:
print("User Profile is NOT VALID")
```
